Cool Bathroom Gadgets

Segment 5642

Do you step out of the shower each morning to a fogged mirror that slows your daily grooming routine and leads to towel- and hand-streaked mirrors? Keep your mirror, but banish that inconvenience with the Clear Mirror Fogless Mirror System. Designed for easy [Installation](#) in existing homes,

Clear Mirror is a durable 1/16" thick silicone rubber heating pad that sticks to the back of your mirror with pressure sensitive, non-hazardous adhesives and warms your mirror to prevent fogging. It comes on when you turn your bathroom light on, and immediately defogs the mirror and keeps it that way. Clear Mirror creates a safe level of surface temperature so it can't overheat or damage your mirror. It is designed to be wired directly to a remodel box and is powered by your existing bathroom overhead power supply. Using Clear Mirror costs the same as operating a light bulb. This fogless mirror system comes with detailed, diagrammed, step-by-step [Installation](#) instructions that are easy for a do-it-yourselfer with some basic remodeling skills. Clear Mirror measures 18"x 20", uses 110V and 100 Watts, is UL Listed, and carries an unconditional 2-year manufacturer's warranty.

For everyone who loves to sing in the shower... imagine! You can soap to the Stones, shampoo to Sinatra and rinse to your favorite rock, pop, country, musical, symphony, rap or opera. When you've finished showering, just take the portable CD Shower Companion with you. It comes with a handy countertop stand that cradles the player vertically in a small amount of space. Big-button controls are easy to use. The LCD screen shows the CD track, time, station and battery strength. Includes hanging hooks and wall-mount bracket. The CD Shower Companion™ is the only water-resistant CD player for use in the shower. With superior stereo sound from quality dual speakers. Just open the vertical compartment and place a CD inside. It will stay safe and dry behind the water-resistant sliding door and you'll enjoy music as never before!

Check Out:

An easy swipe across the forehead, "gentle as a mother's kiss," the company writes, is all it takes to get an accurate temperature reading in mere seconds, without disturbing even a sleeping baby. How does it work? Since room temperature affects skin temperature, the SensorTouch measures the temperatures of both the forehead (near the temples) and the ambient air several times a second.

Then locks onto the highest, that of the artery at the temple, its heat-balance equation then calculates a clinically accurate measure of body temperature and displays it on an easy-to-read LED screen. It's simple, accurate, fast, and foolproof. SensorTouch is great for everyone from the very young to the very old. Comfortable ergonomic device is just 7" long and weighs only 8 oz. Runs on one 9v battery (included).
